1. Introduction

The Inland Revenue Authority of Singapore (IRAS) provides application programming interface (API) services to allow application developers to submit and retrieve tax related matters using HTTP requests. Most of the APIs will be in the form of a JSON web service which reduces client/server coupling and thus enabling easier integration between IRAS' service with external developers.

There will be a variety of services available in due time. While some services require a simple GET, others may be secured and require credentials that can be passed via HTTP header parameters which are as follows :

X-IBM-Client-Id	String containing the client ID of the application invoking IRAS API. This value will be provided to the application vendor by IRAS. E.g. a1234b5c-1234-abcd-efgh-a1234b5cdef
X-IBM-Client-Secret	String containing the client secret of the application invoking IRAS API. This value will be provided to the application vendor by IRAS. E.g. a12345bC67e8fG9a12345bC67e8fG9a12345bC67e8fG9

This document serves to help developers consume the API services provided by IRAS.

2. Registration at API Portal

Application developers are required to register for an account at <https://apisandbox.iras.gov.sg/> to subscribe to IRAS API services for Sandbox Testing and at <https://apiservices.iras.gov.sg/> for Production.

A computer-generated email will be sent to the subscriber's email account for account activation of the API Portal.

3. API Services

IRAS will provide various API services for the calculation of Property Tax. The following sections describe the request and response for each of the services.

The table below shows the list of Property Tax Calculation API services currently available in IRAS.

S/No	Name of API Services	Description	URL
1	Property Tax Calculation using Property Details	This API can be used for calculating the property tax payable by entering the building address, postal code, land description or property tax reference number, together with the property type, occupancy status (if necessary) and tax period.	For Sandbox Testing: https://apisandbox.iras.gov.sg/iras/sb/PTTaxCalc/CalPptyTaxByPptyDet
			For Production Usage: https://apiservices.iras.gov.sg/iras/prod/PTTaxCalc/CalPptyTaxByPptyDet
2	Property Tax Calculation using Annual Value	This API can be used for calculating the property tax payable by entering the annual value, together with the property type, occupancy status (if necessary) and tax period.	For Sandbox Testing: https://apisandbox.iras.gov.sg/iras/sb/PTTaxCalc/CalPptyTaxByAV
			For Production Usage: https://apiservices.iras.gov.sg/iras/prod/PTTaxCalc/CalPptyTaxByAV
3	Property Tax Apportionment Calculation using Property Details	This API can be used for calculating the property tax payable of the Seller and Buyer by entering the building address, postal code, land description or property tax reference number, together with the buyer's tax liability date.	For Sandbox Testing: https://apisandbox.iras.gov.sg/iras/sb/PTTaxCalc/CalPptyTaxApportionmentByPptyDet
			For Production Usage: https://apiservices.iras.gov.sg/iras/prod/PTTaxCalc/CalPptyTaxApportionmentByPptyDet

3.1 General Information

3.1.1 Production Usage

Approval is required to use this service.

The following parameters must be populated in the HTTP header:

X-IBM-Client-Id	String containing the client ID of the application invoking IRAS API. This value will be provided to the application vendor by IRAS.
X-IBM-Client-Secret	String containing the client secret of the application invoking IRAS API. This value will be provided to the application vendor by IRAS.

3.1.2 Common Interface Information

- JSON is case sensitive by specifications.
- All date strings are to be represented in compliance to the [ISO-8601](#) standard.
- All string fields are subject to validation of the following acceptable characters that is allowed (in red)
 - [a-zA-Z0-9'@#()-.!&+ _] (**Note:** whitespace is included)
- All properties follow the camel-case convention.
- Unless stated as optional, all JSON object properties must be specified.
- Unless otherwise specified, all JSON services are invoked using HTTP verb POST.
- All input data format are as specified like the following:

3.1.3 Common Response Payload

All response payloads share the following common fields:

data	Object	The data property will be populated differently based on the API that is being invoked.
returnCode	Integer	10 : Success - The request was successfully processed. 20 : Warning - The request was successfully processed. However, there are non-fatal issues. Please refer to the “info” object for diagnostic information. 30 : Failure – The request was not processed. Refer to “info” object for error information.
info	Object	This complex object holds any diagnostic information that will allow developers to debug their failed requests.
info.message	String	Diagnostic message in the event of warning or error.
Info.messageCode	Integer	Integer code signifying the type of error or warning. 850300 : Request object is null – The incoming JSON request is null. 850301 : Arguments error – There is an error with one of the arguments provided. 850302 : Generic error – There is an exception within the

		<p>service.</p> <p>850303 : Service is inactive.</p> <p>850304 : Service is not authorized for usage based on the provided credentials.</p> <p>850305 : Invalid test user – The input fields provided are not valid for sandbox testing.</p> <p>400348 : Property record not found.</p> <p>10454 : Property is not in Valuation List.</p> <p>919047 : We are unable to process as there are more than 2 tax rates. Please obtain PT bill/notice from owner.</p> <p>850301 : Arguments error – Please enter a valid date within the current year.</p>
info.fieldInfoList	Array	An array for FieldInfo objects.
info.fieldInfoList.field	String	Name of the field that resulted in a warning / error.
Info.fieldInfoList.message	String	Diagnostic message provided to aid consumer’s developers.

3.2 Property Tax Calculator with Property Details

3.2.1 Request Payload

criteria	String	Search Criteria: 1 = Search by building address (blkHouseNo, streetName are required fields. storeyNo, unitNo where applicable) 2 = Search by land description (surveyDistrict, mkTsNo, lotNo are required fields) 3 = Search by property tax reference number (pptyTaxRefNo is required field) 4 = Search by postal code (postalCode is required field. storeyNo, unitNo where applicable)
postalCode	String	Postal Code
storeyNo	String	Storey Number
unitNo	String	Unit Number
blkHouseNo	String	Blk / House Number
streetName	String	Street Name
surveyDistrict	String	Survey District 1 : MK 2 : TS
mkTsNo	String	MK or TS number according to survey district
lotNo	String	Lot Number
plotPartParcel	String	Plot / Part / Parcel
pptyTaxRefNo	String	Property Tax Reference Number
propertyClass	String	Property Classification 1 : HDB Flat 2 : Private Residential 3 : Non-residential (Occupancy status is required for HDB Flat and Private Residential)
occpStatus	String	Occupancy Status 1 : Owner-occupied 2 : Let-out / Vacant
periodFrm	String	Period from date of current year to take into consideration for tax computation, specified in ISO-8601 format
periodTo	String	Period to date of current year to take into consideration for tax computation, specified in ISO-8601 format

Sample JSON request payload

```
{
  "criteria": "1",
  "blkHouseNo": "999",
  "streetName": "PRINCE AVE 4",
  "storeyNo": "08",
  "unitNo": "111",
  "postalCode": "",
  "surveyDistrict": "",
  "mkTsNo": "",
  "lotNo": "",
  "plotPartParcel": "",
  "pptyTaxRefNo": "",
  "propertyClass": "1",
  "occpyStatus": "1",
  "periodFrm": "2018-01-01",
  "periodTo": "2018-12-25"
}
```

3.2.2 Response Payload

data	Object	The object payload containing the reference code of successful submission.
data.netTaxPayable	String	Net tax payable.
data.periodFrm	String	Period from date taken into consideration for tax computation, specified in ISO-8601 format
data.periodTo	String	Period to date taken into consideration for tax computation, specified in ISO-8601 format
returnCode	As per Section 3.1.3	
info		
info.message		
info.messageCode		
info.fieldInfoList		
info.fieldInfoList.field		
info.fieldInfoList.message		
info.fieldInfoList.recordID		

Sample success JSON response payload

```
{
  "returnCode": 10,
  "info": {
    "fieldInfoList": []
  },
  "data": {
    "netTaxPayable": "280.00",
    "periodFrm": "2018-01-01",
    "periodTo": "2018-12-25"
  }
}
```

Sample error JSON response payload

```
{
  "info":{
    "fieldInfoList":{
      "fieldInfo":[]
    },
    "message":"Property is not in Valuation List",
    "messageCode":"10454"
  },
  "returnCode":"20"
}
```

3.3 Property Tax Calculator with Annual Value

3.3.1 Request Payload

annualValue	String	Annual Value of property
occpStatus	String	Occupancy Status 1 : Owner-occupied 2 : Let-out / Vacant
periodFrm	String	Period from date of current year to take into consideration for tax computation, specified in ISO-8601 format
periodTo	String	Period to date of current year to take into consideration for tax computation, specified in ISO-8601 format
propertyClass	String	Property Classification 1 : HDB Flat 2 : Private Residential 3 : Non-residential (Occupancy status is required for HDB Flat and Private Residential)

Sample JSON request payload

```
{
  "annualValue": "20000.00",
  "propertyClass": "1",
  "occpStatus": "1",
  "periodFrm": "2018-01-01",
  "periodTo": "2018-12-25"
}
```

3.3.2 Response Payload

data	Object	The object payload containing the reference code of successful submission.
data.netTaxPayable	String	Net tax payable.
data.periodFrm	String	Period from date taken into consideration for tax computation, specified in ISO-8601 format
data.periodTo	String	Period to date taken into consideration for tax computation, specified in ISO-8601 format
returnCode	As per Section 3.1.3	
info		
info.message		
info.messageCode		
info.fieldInfoList		
info.fieldInfoList.field		
info.fieldInfoList.message		
info.fieldInfoList.recordID		

Sample success JSON response payload

```
{
  "returnCode": "10",
  "info": {
    "fieldInfoList": {
      "fieldInfo": []
    }
  },
  "data": {
    "periodFrm": "2018-01-01T00:00:00",
    "periodTo": "2018-05-31T00:00:00",
    "netTaxPayable": "2083.33"
  }
}
```

Sample error JSON response payload

```
{
  "returnCode": "30",
  "info": {
    "messageCode": "850301",
    "message": "Arguments Error",
    "fieldInfoList": {
      "fieldInfo": [
        {
          "message": "Period start date later than end date",
          "field": "periodFrm / periodTo"
        }
      ]
    }
  }
}
```

3.4 Property Tax Apportionment Calculator with Property Details

3.4.1 Request Payload

criteria	String	Search Criteria: 1 = Search by building address (blkHouseNo, streetName are required fields. storeyNo, unitNo where applicable) 2 = Search by land description (surveyDistrict, mkTsNo, lotNo are required fields) 3 = Search by property tax reference number (pptyTaxRefNo is required field) 4 = Search by postal code (postalCode is required field. storeyNo, unitNo where applicable)
postalCode	String	Postal Code
storeyNo	String	Storey Number
unitNo	String	Unit Number
blkHouseNo	String	Blk / House Number
streetName	String	Street Name
surveyDistrict	String	Survey District 1 : MK 2 : TS
mkTsNo	String	MK or TS number according to survey district
lotNo	String	Lot Number
plotPartParcel	String	Plot / Part / Parcel
pptyTaxRefNo	String	Property Tax Reference Number
dateBuyerLiability	String	The date of the buyer's liability for tax computation, specified in ISO-8601 format Date entered must be >= today date till end of the current year

Sample JSON request payload

```
{
  "criteria": "1",
  "blkHouseNo": "999",
  "streetName": "PRINCE AVE 4",
  "storeyNo": "08",
  "unitNo": "111",
  "postalCode": "",
  "surveyDistrict": "",
  "mkTsNo": "",
  "lotNo": "",
  "plotPartParcel": "",
  "pptyTaxRefNo": "",
  "dateBuyerLiability": "2018-06-15"
}
```

3.4.2 Response Payload

data	Object	The object payload containing the reference code of successful submission.
data.sellerNetTaxPayable	String	Net tax payable by the Seller.
data.buyerNetTaxPayable	String	Net tax payable by the Buyer.
data.annualValue	String	Annual Value of the Property
data.taxRate	String	Owner-Occupier Tax Rate or Non-Owner-Occupier Residential Tax Rate or Non-Residential Tax Rate
returnCode	As per Section 3.1.3	
info		
info.message		
info.messageCode		
info.fieldInfoList		
info.fieldInfoList.field		
info.fieldInfoList.message		
info.fieldInfoList.recordID		

Sample success JSON response payload

```
{
  "returnCode": 10,
  "info": {
    "fieldInfoList": []
  },
  "data": {
    "sellerNetTaxPayable": "400.00",
    "buyerNetTaxPayable": "800.00",
    "annualValue": "20400.00",
    "taxRate": "Owner-Occupier Tax Rate"
  }
}
```

Sample error JSON response payload

```
{
  "returnCode": "30",
  "info": {
    "messageCode": "850301",
    "message": "Arguments Error",
    "fieldInfoList": {
      "fieldInfo": [
        {
          "message": "Please enter a valid date within the current year.",
          "field": "dateBuyerLiability"
        }
      ]
    }
  }
}
```

3.5 Sandbox Testing

As explained in [section 2](#), developers can first create an account in the Sandbox environment to make API calls to our Sandbox URL. This allows the developers to mimic the characteristics of our production environment and create a simulated response from our API.

3.5.1 Property Tax Calculator by Property Details Service

Input	Expected Output

4. Sample Code (C#)

```

using System;
using System.Net;
using System.IO;
using System.Text;

// jsonData – contains data from Section 3.1.1 of this document
public static void callWebAPI(string jsonData, string url)
{
    try
    {
        var httpWebRequest = (HttpWebRequest)WebRequest.Create(url);
        httpWebRequest.ContentType = "application/json;";
        httpWebRequest.Method = "POST";

        //Step 1: Enter the Client-Id given by IRAS
        httpWebRequest.Headers["Client-Id"] = "{YOUR_CLIENT_ID}";
        //Step 2: Enter the Client-Secret given by IRAS
        httpWebRequest.Headers["Client-Secret"] = "{YOUR_CLIENT_SECRET}";

        // Step 3: Call API using POST
        using (var streamWriter = new StreamWriter(httpWebRequest.GetRequestStream()))
        {
            streamWriter.Write(jsonData);
            streamWriter.Flush();
            streamWriter.Close();
        }

        // Step 3a: Output response
        var httpResponse = (HttpWebResponse)httpWebRequest.GetResponse();
        using (var streamReader = new StreamReader(httpResponse.GetResponseStream()))
        {
            var result = streamReader.ReadToEnd();
            //print the received response
            Console.WriteLine(result);
        }
    }
    catch (WebException e)
    {
        if (!string.IsNullOrEmpty(e.Message))
        {
            // Step 3b: Print general errors
            Console.WriteLine("Exception - ");
            Console.WriteLine(e.Message);
        }

        if (e.Response != null)
        {
            // Step 3c: Print Output response exception
            Stream receiveStream = e.Response.GetResponseStream();
            StreamReader readStream = new StreamReader(receiveStream, Encoding.UTF8);
            // print the error received from Server
            Console.WriteLine("Response error received - ");
            Console.WriteLine(readStream.ReadToEnd());
        }
    }
}

```
